4. DESCRIPTION OF THE ACTIVITIES

This workshop explored innovative approaches to evaluate the effectiveness and safety of drug therapies as alternatives to conventional animal models, with a specific focus on their applicability to Vector-Borne Parasitic Diseases (VBD). We will delve into advancements in bioengineering techniques, including 2D and 3D tissue cultures, such as organ-on-chip systems, non-traditional organism models like zebrafish and chick embryos, and computer/mathematical models. The workshop was organized by WG3 (“Coordination of in vitro-to-in vivo translation of One Health leads and candidates”), WG4 (“Integration of R&D process-environmental studies and translation in informed whitepaper”), and WG6 (“Promote the transfer of knowledge and beyond”). Besides invited speakers, 5 oral presentations were selected based on submitted abstracts.

During the “Young Innovators Mini-Workshop” and to assist their future scientific careers, young researchers engaged in sessions on “Career Development” and on “Green and sustainable practices in scientific research”. This mini-workshop was organized by HG4 (Young Researcher Innovators Organization).
