

Biological control generates 'desirable outcomes' within all One Health dimensions, research reveals

October 16, 2024

"New CABI-led research has revealed that biological control generates "desirable outcomes" within all One Health dimensions—mitigating global change issues such as chemical pollution, biocide resistance, biodiversity loss, and habitat destruction." ... "Framing biological control in a One Health context helps to unite medical and veterinary personnel, ecologists, conservationists and agricultural professionals in a joint..."

The Missing Professional in the
Chemistry of Care: Medicinal
Chemists and the One Health
Philosophy

The concept of One Medicine
focused on the interconnection
between animal health and
human health with the inclusion
of the connection with ecosystem
health, bringing the One Health
term into being. However,
another key player is key to
elevating this transdisciplinary
approach—the Medicinal
chemist.
